

Claims

What is claimed is:

1. Construction of the leather strap comprising perforations, slit and a rectangular perforation; when assembled together with the changed construction of the industrially manufactured hairclip, the strap forms the attaching device for attaching tie.
2. The change of the construction of the pressing slat of the clip on the basis of which the attaching device for the attaching tie is constructed:
 - (a) The pressing slat is raised above the body of the clip by the width of the strap (claim 1).
 - (b) The pressing slat of the clip is widened at its base.
3. Construction of the attaching device for the attaching tie, which is constructed in such a way that the strap (claim 1) and the clip are mutually fixed on the two sides:
 - (a) On one side, the strap (claim 1) is fixed by the widened base of the pressing slat (claim 2), which is passed through the slit from the backside of the strap (claim 1).
 - (b) On the other side, the strap (claim 1) and the clip are fixed with the help of a clincher in such a way that the clincher also bonds together both of the pressing parts of the body of the clip and/to the backside of the strap (claim 1).
